Rock-Paper-Scissors Report
=====

Total Rounds: 100

Outcome Breakdown

Result	
AI Wins	84
Draw	11
Player Wins	5

Player Win Rate Per Move

Player Move	
Paper	5.9
Rock	5.9
Scissors	3.1

Notes

- The charts summarize outcome distribution, player effectiveness by move and consistency across the game.
- Win streaks indicate momentum, while start/end comparison reveals pressure performance.

Conclusion

In this simulation of 100 rounds, The AI exhibited a dominant performance with 84 wins, compared to only 5 player victories.

Player win rates per move were:

- Paper: 5.9%
- Rock: 5.9%
- Scissors: 3.1%

Estimated player win rate: 5.00%

95% Confidence Interval: (2.15% - 11.18%)

The streak analysis revealed patterns in game flow, highlighting consistent runs of AI Wins and occasional disruptions.

This suggests that the AI maintained greater strategic momentum throughout the game.

Future experiments could explore more adaptive strategies or varied decision models to challenge the observed trends and test robustness further.
